Compromise Nothing

30 years of Refinement & Refusal to Compromise

As a recent graduate of the University of Kansas, Pack St. Clair had some definite ideas about boats, the boats he had loved as a youngster. He went to the 1969 boating industry trade show in Chicago, and he discovered there that his ideas had not been tried. He learned that his thinking about boats might be brand new.

Pack imagined runabouts being built with the quality and prestige of ocean-going yachts. His thinking involved few exceptions. And no compromises.

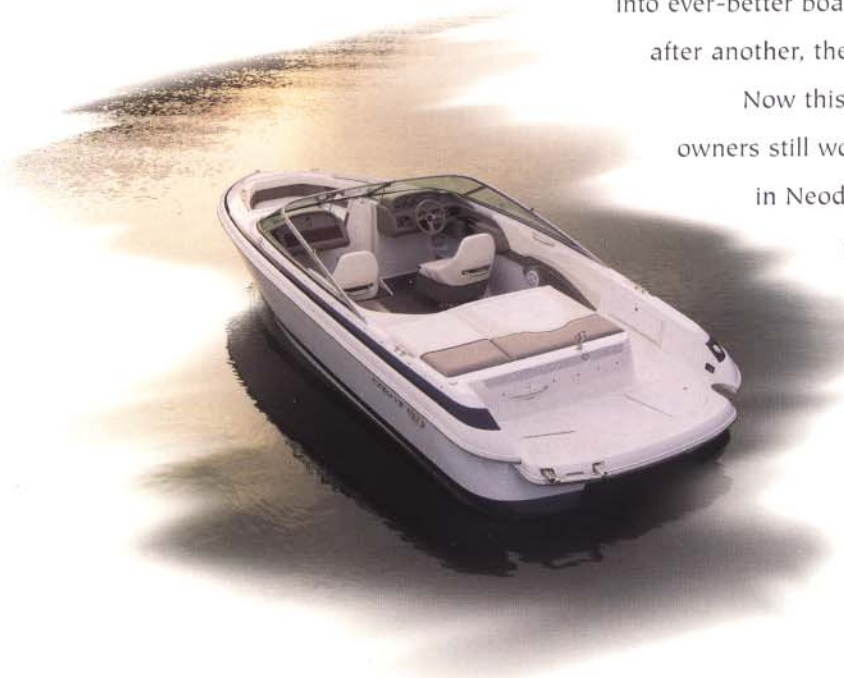

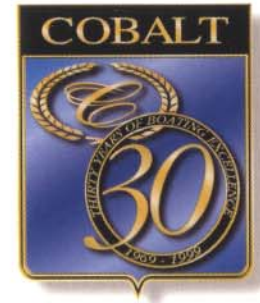

From the beginning, his partner Dan Bramhall and he worked in the day-to-

day. All construction then, as now, took place in-house. They learned, and they built what they learned into ever-better boats. They concentrated day after day on the details of their boats' construction and, one after another, the details gathered toward something they called "Cobalt."

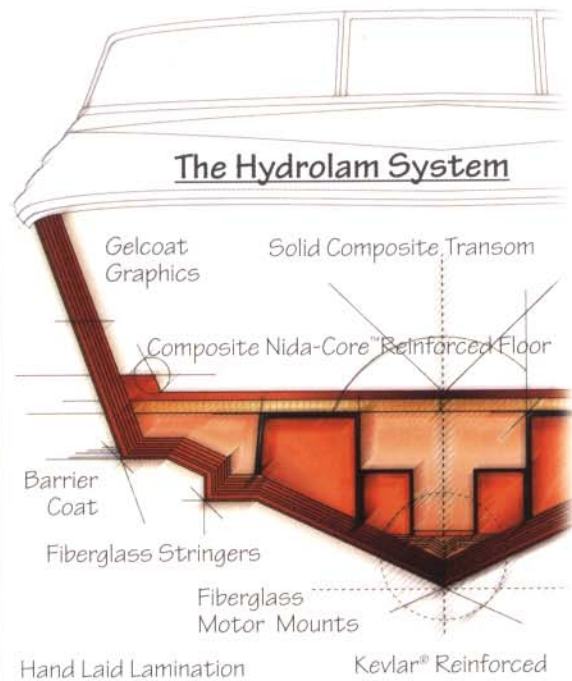

Now this company is 30 years old, one of the oldest boat-builder in America with its original owners still working in the daily management of the business. The second generation is now at work in Neodesha, perpetuating the mindset, ensuring that the Cobalt traditions of design and construction will continue.

Never content to be mere assemblers, the people of Cobalt are, first and last, boat-builders, people who ask of themselves a fundamental question: "How can we build it better?"

In response, a thousand answers have been crafted into Cobalt boats over these ten thousand Cobalt days. Refined, passionate, answers that refuse to compromise, to ever ever admit that good enough is good enough.

Composite materials & Kevlar® reinforcement for Superior Construction

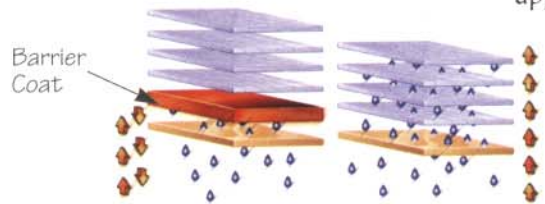

HYDROLAM is Cobalt's multifaceted approach to total fiberglass construction. It eliminates the extra weight and the inevitable rotting found in wood construction. In the Hydrolam process, *fiberglass stringer systems* and a *fiberglass cockpit sole* replace traditional wood components for rot-free dependability and less weight with no sacrifice of structural strength.

Hydrolam involves one-piece construction of deck surfaces, interior side walls, and the floor. It's a *liner deck*, if you will. The floor is reinforced with *Nida-Core*™, a synthetic honeycomb material that, despite its light weight, is structurally superior to plywood or balsa wood. *Solid composite transoms* replace the wooden transoms used by other manufacturers, and Cobalt's *fiberglass motor mounts* are far superior to the wooden construction used in other boats.

The Hydrolam process calls for the application of a *Kevlar® /E-glass hybrid* over the critical high stress areas in the lamination of Cobalt hulls. Kevlar® combines high strength, light weight and thermal stability with ten times the impact resistance of fiberglass. It's 43% lighter than an equal value of fiberglass. It dampens vibration like few other substances on earth and, when combined with E-glass fibers, Kevlar yields a knit material of superior strength.

GELCOAT GRAPHICS produce perfect, permanent images. Some boat manufacturers merely add tape graphics to the gelcoat surface, graphics that will surely crack and peel, graphics that are easily damaged. At Cobalt, the graphics begin with a mask in the mold. As colors of gelcoat are applied and the masks removed, the graphics evolve as an integral part of the gelcoat finish.

THE BARRIER COAT is an extra layer of protection against water vapor that, in its penetration of the fiberglass, might cause blistering. The Cobalt Hydrolam process represents the best blister-resistance available anywhere, effectively eliminating blistering and print-through of fiber lamination. With the Cobalt barrier coat, expect a finish that's spectacular by any benchmark.

Process Control & Testing

Assurance of Quality Continual

INSTRON TENSILE TESTER measures the ultimate strength, yield strength, elongation, and stiffness of Cobalt laminates. Cobalt is committed to the application of next-century science through research, engineering, testing, and monitoring of our materials, equipment, and processes.

QUALITY ASSURANCE starts well before boat construction ever begins. Testing to specification prior to use in production ensures that only the best materials ever come close to a Cobalt. Statistical analysis of gelcoats, barrier coats, resin, glass, adhesives, and core materials certifies the absolute quality consistency.

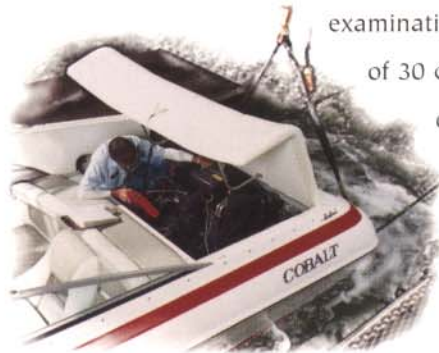

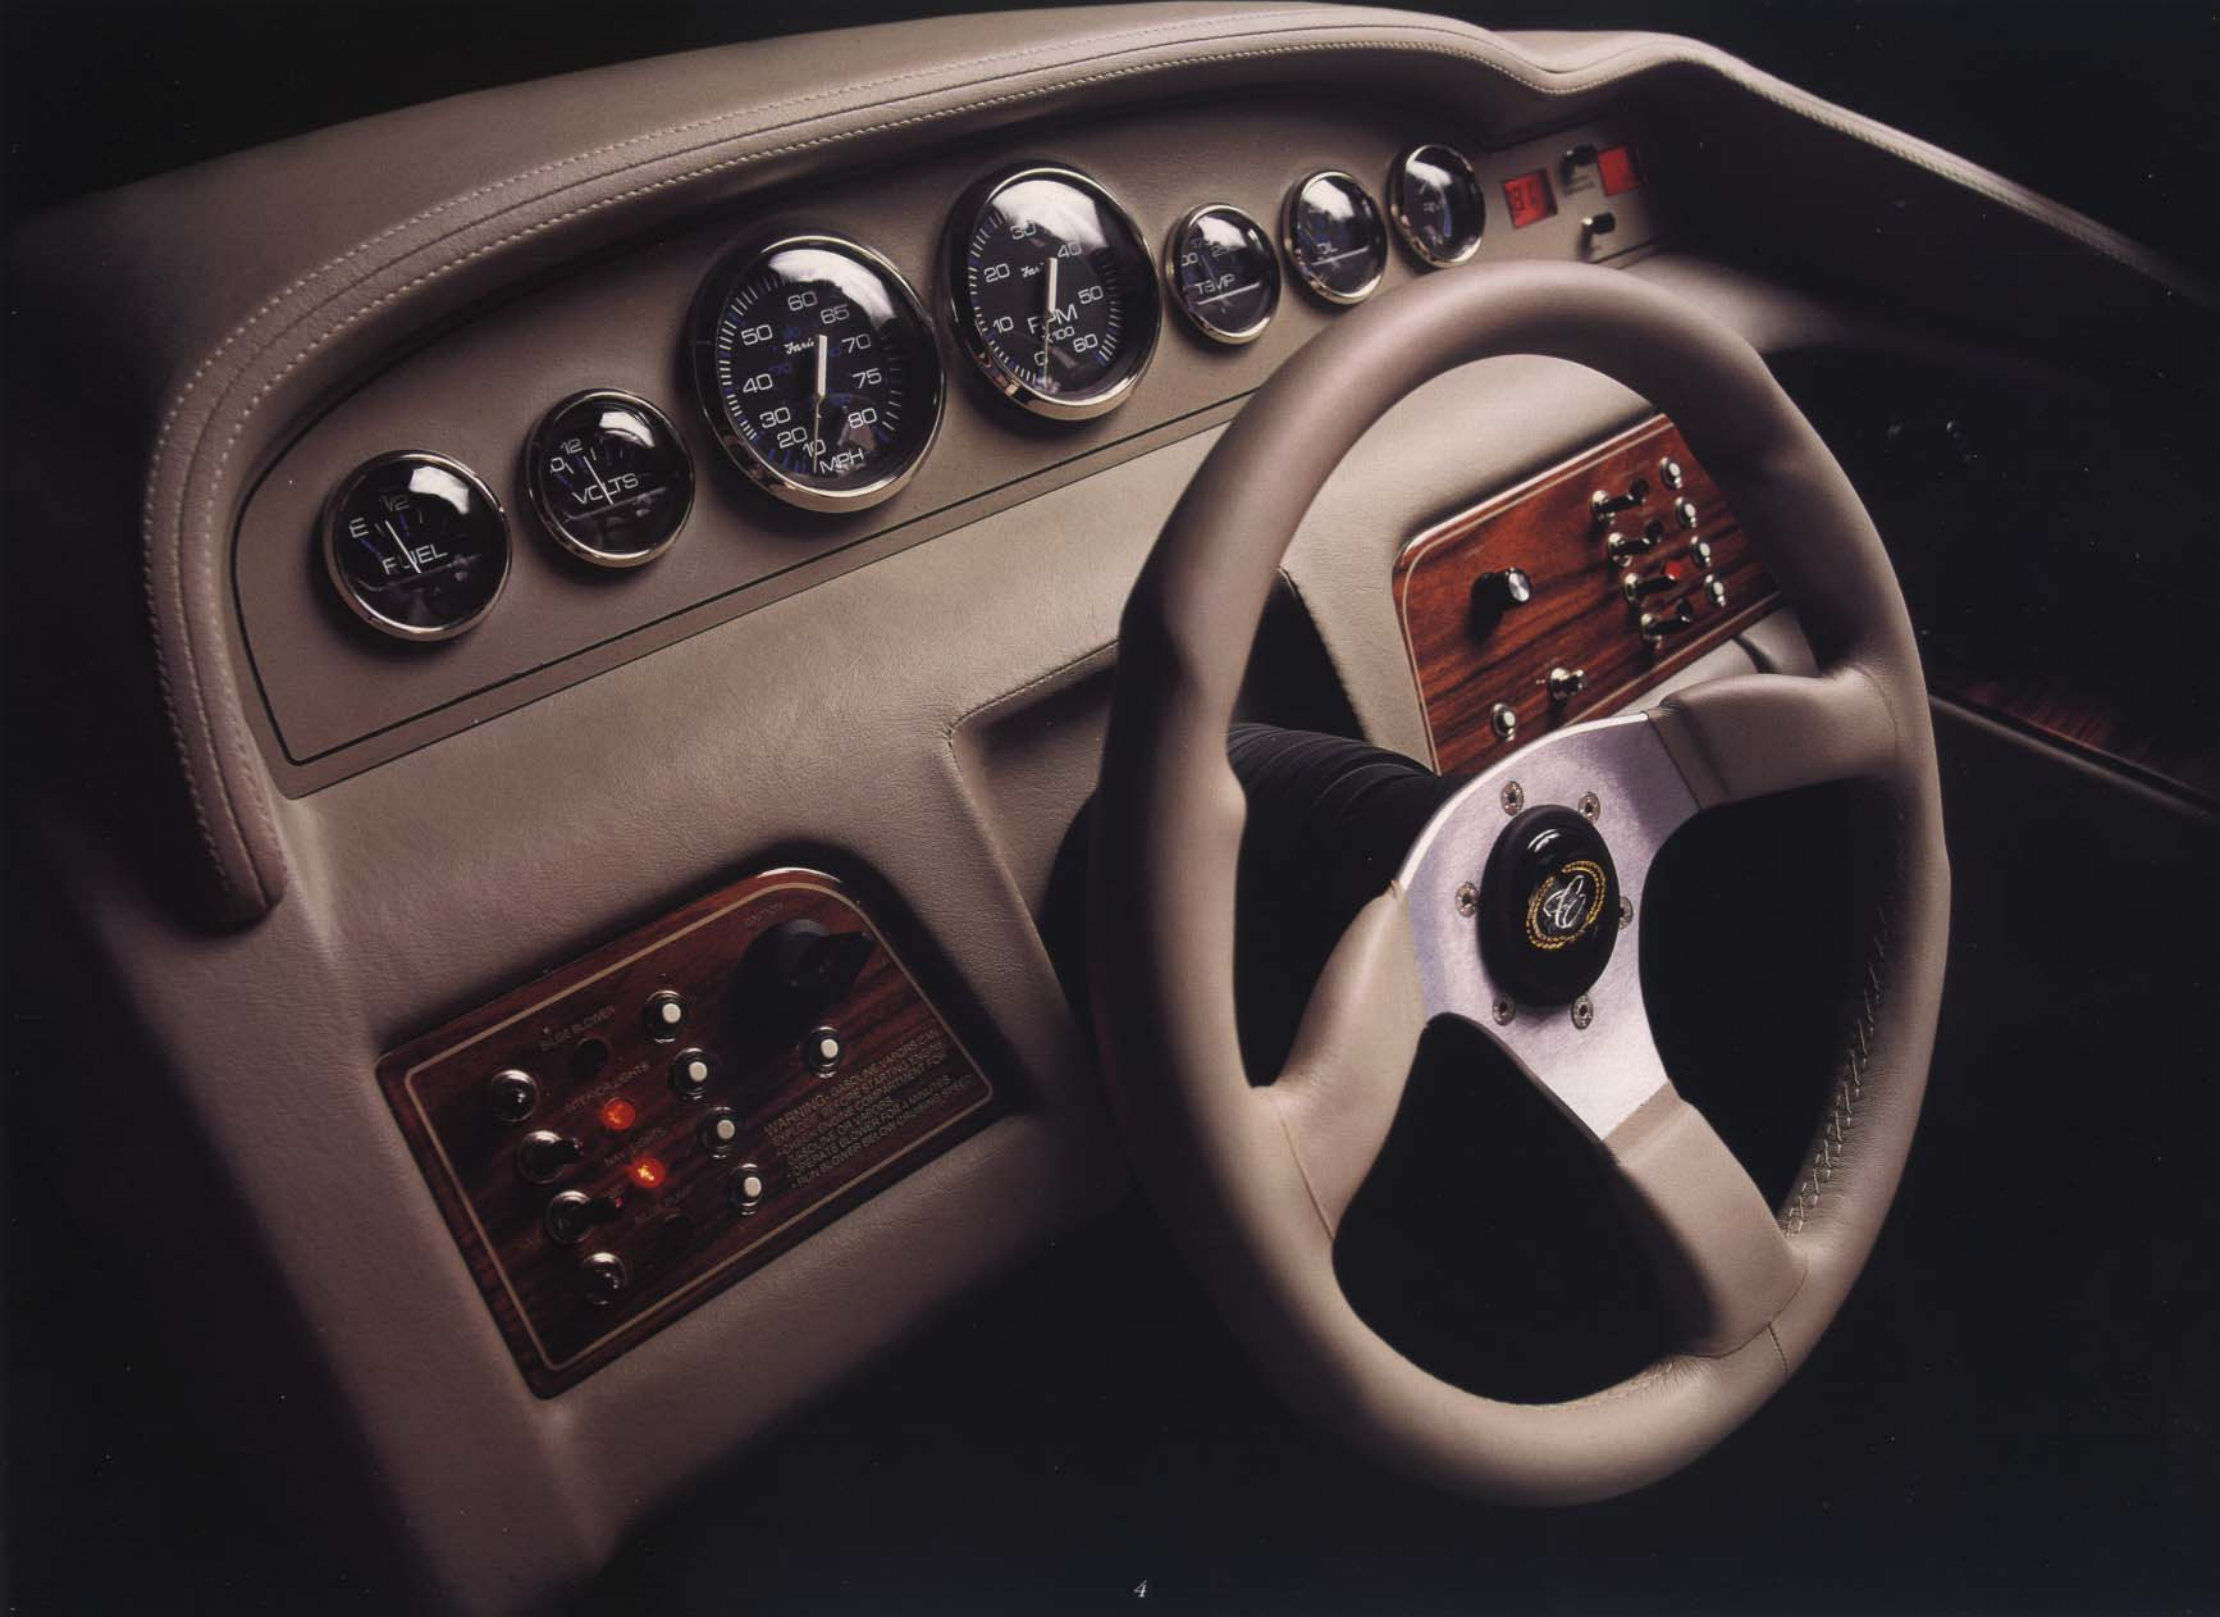

STATISTICAL PROCESS CONTROL is second nature at Cobalt. SPC methodology monitors glass-to-resin ratio, catalyst and cure times, the atomization pressure of spray and lamination equipment, resin temperatures, and plant environment (temperature and humidity). Such controls guarantee that Cobalt fiberglass strength, Cobalt finishes remain the industry standard.

ULTRASONIC TESTING. Every Cobalt undergoes meticulous electronic testing for uniform hull thickness. As a matter of fact, every hull undergoes intensive scrutiny in 24 different places on the running surface in addition to more test sites on the deck and the sides of the hull. At Cobalt, uniform Fiberglass thickness is a matter of fact.

TEST TANK PROGRAM. No Cobalt leaves the factory without the rigorous examination of the 30/30 test program. It's a stem-to-stern check of 30 critical systems in the boat during a full half-hour of in-water, under-power operation, with particular emphasis on the engine, outdrive, and electrical systems. The 30/30 program is the final examination, a last comprehensive insistence that this boat, your new boat is good enough to be called Cobalt.

A Lifetime of Comfort & ^{Meticulous} Luxury

FLIP-LIP BUCKETS. Yet another Cobalt innovation, the front of the flip-lip bucket folds upward for a safe, comfortable high-rise seating option, affording an unobstructed view above the windshield. All Cobalt captain chairs wrap the rider in comfort and security.

VARADENSE SEATING lies at the heart of Cobalt interior comfort. The concept calls for multiple densities of foam, with the heaviest foam used at the base to prevent breakdown and "bottoming out" on rough water. Softer foams at the surface deliver comfort and contour. The center foam, using memory-based compression, conforms to the physical shape of the occupant. Built on rot-proof composite structural supports and covered in vinyl exclusive to Cobalt, all seat-support mechanisms are mounted to aluminum plate reinforcement embedded in the fiberglass.

CUSTOM DASH. Cobalt craftsmen are preoccupied with detail. Cases in point: the perfect stitchery on the dash cowl, straight and true and matched to the contour. The screen printing on all-aluminum dash panels. The feel of leather on the tilt steering wheel. The reliability of the helm-based circuit breakers and aircraft-style stainless steel switches. Only Cobalt insists on these combinations of reliability and timeless style.

WALK-THRU DOORS. So much that's merely optional on other boats is standard equipment on a Cobalt. Walk-thru bow doors, for instance. Big, solid, acrylic doors that lock in place for cockpit comfort on early spring mornings. Experienced boaters insist on these doors, but once again only Cobalt has responded.

Strength & Desire

By Design *Relentless*
to be *Second to None*

STAINLESS STEEL PROTECTION. Only Cobalt invests the time, the ingenuity, and the money necessary to protect a boat's most vulnerable parts. The *bow scuff plate* guards against gouges in the bow during trailering. A *stainless steel rubrail* protects the hull from abrasion dockside. At the windshield, *solid stainless steel braces* refuse to bend, delivering inflexible support to this critical stress-point.

ALUMINUM ENGINE VENTS, machined to perfection, integrate seamlessly into graceful Cobalt lines. Where other manufacturers are content to use plastic in this high-abuse application, Cobalt insists on 3/8" aluminum for strength and durability. The vents are then finished with color-matched, baked enamel.

FIBERGLASS MOTOR BOX. Some manufacturers settle for covered plywood, but Cobalt constructs its motor boxes and sundeck lids as one piece from structural fiberglass. Such attention to extra detail creates superior structural integrity while eliminating the possibility of rot, reducing engine noise, and adding an extra measure of finish. Of course, gas cylinders or electric actuators assist most boxes and lids.

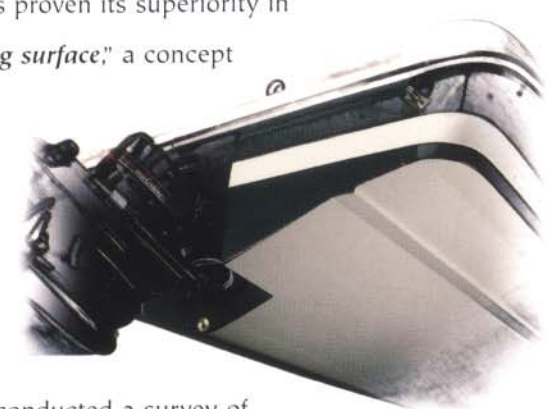

STORAGE SPACE. Cobalt understands today's recreational trends and responds with oversized, lockable storage spaces that can easily accommodate a family-size fleet of water toys. From *rubber mats* to *polished gelcoat* to *wet-storage netting*, Cobalt storage is practical in its design, meticulous in its finish.

CUSTOM WIRING HARNESSSES are made specifically for each model, with no splices and all connectors machine-secured. *Two grounding terminals*, one at the dash, a second in the engine compartment, make the Cobalt electrical system eminently reliable.

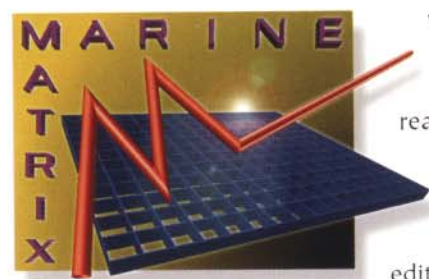

A proven *Design* First of its Kind & *Results* Expected of a Leader

THE HULL DESIGN. Time and time again, the Cobalt hull has proven its superiority in handling and ride. In 1985, Cobalt pioneered the “*extended running surface*,” a concept now imitated throughout the boating industry, but not yet even remotely duplicated. The Cobalt hull simply puts more running surface in contact with the water at critical moments of performance. With matchless stability in turns, quickness in planing, and minimal bow rise, the Cobalt hull guarantees the very quiet, but altogether unmistakable sensations of the Cobalt ride.

MARINE MATRIX, the independent consumer research firm, conducted a survey of over 60,000 boat owners. Cobalt earned the overall top ranking among all domestic manufacturers. In fact, Cobalt

won 28 of the 30 categories and ranked second in the other two. Such numbers indicate that knowledgeable boaters buy Cobalts for their own reasons; they enjoy them for reasons perhaps never suspected on the first day on the water.

BOATING EXPERTS of the industry press agree. Time and again the editors of popular boating magazines echo the Cobalt owners praises.

An editor for *Motor Boating & Sailing* writes, “As I stepped aboard the 293 in Miami, an unbidden ‘Mmmm’ escaped my lips over its gorgeous fit and finish.”

Trailer Boats, “Cobalt has raised the trailerboat standards to a level matched by few and exceeded by none.”

From *Boating World* magazine, “Cobalt has earned the right to be considered the benchmark of boating quality”

And from *WaterSki* magazine, “If you believe every boating brochure’s claim about the ‘best this and that’, you’d never know the difference between the good boats and the great ones. Unless you stepped into a Cobalt.”

**AFTER 30 YEARS, EVOLUTION
CAN BECOME REVOLUTION.**

Begin with a fundamental, company-wide commitment to standards that do not bend. Day to day, year to year, seek quiet, incremental improvement. Look always for a better way.

Now, in the last year of the millennium, Cobalt introduces a line of boats born of the technology of tomorrow. But history repeats itself here in Cobalt traditions of craftsmanship and attention to detail.

Find in the pages that follow the Cobalt that best fits your lifestyle, on and off the water. Find the Cobalt that will distinguish itself and its owner in the years to come.

Welcome to a revolution three decades in the making.

190

CIAO.

Fire your travel agent.

The 190 is here to grant your take-me-away wishes for years to come. With that legendary Cobalt ride and the industry's best warranty, the 190 is redefining families' patterns of boat usage. It's the ideal runabout, ready for skiing, tubing, or all-day cruising.

Proven Cobalt construction and premium materials of construction give this most affordable Cobalt genuine long-term value. Packed with performance features, the 190 incorporates an L-lounge interior in a design that maximizes storage space and keeps a six people comfortable during long, unforgettable hours on the water. Bon voyage, weekend after weekend, bon voyage.

200

SOUTHBOUND.

Two-lane highway meets the Gulf of Mexico. Readily trailerable, the 200 with a V-8 power option on board goes directly onto big water, its classic deep-V hull delivering a superb ride and ideal handling characteristics.

The 200 is a study in versatility, ready to deliver a championship wake for skiers and elegant comfort for a lazy day with no particular place to go. A hyper-efficient helm station puts the captain in complete, easy control, while your guests enjoy traditional Cobalt hospitality. Standard features that address every need. Options that answer every waterborne whim.

Outfit the 200 to match your style of fun. Then stick around for a lifetime of pure, perfect enjoyment.

220

MODEL BEHAVIOR.

Just how does the 220 manage to combine all this luxury and all this comfort with muscle-boat performance in a design that compromises exactly nothing?

Look at your new 220 from your guests' perspective. They will step aboard to discover an expansive interior, every amenity within each reach, and a ride with a new definition of "smooth." They'll find in your 220 a boat made for the occasion at hand: an intimate supper in a favorite cove or a full-horse charge to an island retreat. In, under, and around every good time on the 220 lies Cobalt craftsmanship in standard and optional features that speak of elegance, taste, and functionality. Smile.

206

FIRST FLIGHT.

Space really is the final frontier.

The 206 shifts new focus astern. Now larger and equipped with a sturdy, concealed ladder, the activity platform makes everything easier and more enjoyable for skiers, boarders, and swimmers. A walk-thru transom extends the convenience and accessibility. Forward, two plush captain chairs and aft a Varadense bench highlight an interior that wraps around all the fun in the water.

New for '99, the 206 represents a remarkably efficient use of space. In fact, the 206's bow area is identical to the Cobalt 232's, bringing your guests in front of the windshield all the roomy comfort of an even larger boat.

Houston, we have lift-off.

226

RECESS.

In the 226, Cobalt designers found a way to deliver a significantly larger activity platform and the bow area of the next largest Cobalt in a 22-footer. Another of Cobalt's brand new boats for 1999, the 226 puts its extra space and every meaningful amenity in the exact location where they can maximize your enjoyment. An ice chest/wet locker wait on the activity platform for returning skiers and little swimmers, as does a wrap-around lounge with filler cushions for the walk-thru transom.

Couple your 226 with the powertrain that best matches your intended uses, your most likely destinations, as this newest Cobalt becomes a warm-weather playground for family and friends.

The 226. School's out.

232

BORDER CROSSING.

The new rule: you don't necessarily have to come back.

The Cobalt 232 will take you places you've never been before. Go there in spacious comfort with six friends in the cockpit and two more in the bow. The 232 will run all afternoon at cruise, and then settle into a faraway anchorage with range and comfort to spare. This boat represents what we call "trailerable luxury," a study in functionality and perfect finishes amid major volumes of storage capacity — ready to go when you are.

In the midsize 232 you will find the perfect companion for leaving the world behind. One perfect day at a time.

TAKE A BULLET.

Our phrase is "performance beyond speed." It means more than just "fast."

The Cobalt 233 delivers ride, handling, and all appropriate horsepower in the context of a massive entertainment area in the cockpit and the ideal overnight situation in the cabin. The 233's after-dark spaciousness and comfort center around a V berth sleeping two in comfortable roominess. Overhead, a round hatch spreads the moonlight amid a soothing breeze. Indirect lighting contours the cabin. The upholstery is rich, stylish, obvious in its preoccupation with precision stitchery.

This is luxury that lies beyond comparison, for sure. Likely beyond expectation.

For 30 years, it has been the Cobalt way. At any speed.

252

CONFERENCE ROOM.

Please be seated.

The 252 is contoured for accessibility dockside and wrap-around comfort at full throttle. Here's a boat built for the all-important hours when nothing matters more than being together.

With a centerline at a full 25 feet the 252 is spacious, and then some. Storage is everywhere. Sociable to a fault, the 252 is everything entertaining to everyone lucky enough to come along. At once elegant and informal, the 252 makes the meeting work: great sound system, breathtaking views, outstanding graphics, and total captain control of the outcome.

The 252 means business. And adjournment is out of the question.

STOWAWAY.

You can run. And you can hide.

In the 253, total escape begins with a few hundred horses kicking into your idea of action. Cruise for half a day with half a dozen friends and then, all the friends but one debarked, the 253 will rest at anchor in a favorite cove and settle in for the night. Here are the ingredients of getting away: an open and inviting cabin with both a berth and a curved lounge set among soft lighting and behind a curved sliding door of smoked Lexan, privacy curtains, storage for whatever, an optional cabin galley, and premium sound system with a ten-disc CD changer and six waterproof speakers.

Funny. They were here just a minute ago.

272

CUT A RUG.

Might we have a little spin control here? Happy 272 owners have reported actual dance parties on their boats. And why not?

Here's the most generously designed cockpit in its class, with a thoughtful configuration that makes on board entertaining a matter of course. Like waltzes, there are three steps to the 272's unmistakable character: an architectural integration of hull and deck, a carefully engineered set of standard and optional amenities and — amid all the aesthetics — typical Cobalt practicality. No wasted motion in the 272; from anchor locker to helm station to the electrically controlled swim platform, this boat was created to put a little fun in your life.

293

SEA CHANGE.

Your flagship has come in.

The 293 is big. Full of spacious comfort, rich in amenities with chrome the accent of choice, the 293 epitomizes the Cobalt tradition of classic European design. As always though, Cobalt has chosen understatement, elegant in its simplicity, as the overriding principle of the 293's profile.

Your guests will find new benchmarks of convenience and functionality: a wet bar with compressor-driven refrigerator, a fully enclosed head with sink and shower, an adjustable dining table, and dozens more standard extras. Now in its second full year of production, the 293 is the best equipped, roomiest, most powerful Cobalt, the logical result of almost 30 years of boat-building to a higher standard.

Cinder Grey Interior

SEA POWER.

Single-engine MerCruiser and Volvo power options range up to 415 horsepower. Twins, the preferred power teams for the 293, generate up to 280 horses each — Great-Lakes, open-ocean kinds of propulsion.

This is power under close supervision. The helm brings fingertip control of all systems. Depth and air and water temperature gauges are built into the perfectly stitched, fully upholstered dash. The tilt steering wheel is leather-bound, of course. Flip-lip buckets lift the captain and an adventuresome guest above the windshield for a safe, comfortable high-speed ride to the islands, as other guests cruise in all-day comfort in the 293's wide, open spaces.

SEA GREEN.

For 1999, the 293 represents even more uncommon value. With a most competitive base price, the 293 incorporates standard features that are extra-cost options elsewhere. Longevity and utility have long been hallmarks of Cobalt construction, and beneath the 293's sleek lines there stands an unmistakable strength. This boat has already demonstrated its superiority. It will demonstrate its true value in the years of performance and boating enjoyment in the years to come.

Personalize your 293 with an electric stove maybe, or an in-dash global positioning system, or reverse-cycle air-conditioning. Then, with your 293 delivered to your

exact specification, you can begin to explore every nuance of boating excellence. Well done, old salt.

23LS

BUT SERIOUSLY.

We've heard the talk: "This boat has an inordinate predisposition to partying," they say.

The 23LS has quickly proven itself to be a boat for all occasions, able to deliver luxury and high performance amid all the features expected of both top-of-the-line deck boats and the most innovative sport boats. Pick the hull (a full deep-V) that best fits typical water conditions and your usual recreational activity. Designed for versatility, with a long roster of power options for a customized blend of performance, economy, and reliability, here's a boat that believes there's no such thing as too much fun.

Centerline: 23' 2" (7.06 m) Beam 8' 6" (2.59 m) Weight 3880 lbs (1760 kg) Fuel Capacity 55 gal (208 L)

25LS

DECISIONS. DECISIONS.

Sometimes, the immediate future is just not a problem.

In the 25LS you may expect a unique combination of luxury, performance, and recreational adaptivity. Essentially, the 25LS gives you two choices: do more of what you're doing, or do something else. Swim. Ski. Snorkel. Fish. Dive. Cruise. Dine al fresco, and watch the sunset. Some remarkable options complement the 25LS's long list of standard features and the enhanced bite, quick planing, and firm, true turns for which — as a yearling in the Cobalt line — this boat is already known. Please note: the refrigerator is the most popular of those options.

Vote early. Vote often. The 25LS. For whatever you have in mind.

202CS & 203CS

WHOA.

Things are happening so fast around here.

We designed our Competition Series inboard ski boats to serve both accomplished veterans and beginning ski families alike. We thought that the 202CS (bowrider) and 203 CS might blend tournament-level performance with traditional Cobalt comfort, convenience, accessibility, and long-term boating value. We bumped the power, assured the handling, configured the wake, and watched as the 202 promptly won endorsement from the AWSA for non-record tournaments and the 203 as a record-capable towboat. Now we know that Cobalt craftsmanship applies to a family weekend on the water as well as to the rigors of competitive skiing.

Hang on.
